

## DESIGN

Uxello analyses your needs and the different types of risk on your site to formulate a draft proposal with respect to your framework.

The business manager, your point of contact throughout the project, coordinates the design office and on-site work teams to successfully complete the implementation phase, in compliance with contractual commitments. He provides an advisory role and adapts to your operating constraints.

Throughout the duration of the project, our technical and design teams are in permanent contact with inspectoral, regulatory and insurance bodies. They are thus able to ensure the best technical solutions for your project as well as conforming to regulations whilst also using innovations in areas such as hydraulic calculations, design and simulation networks (REVIT, Cadworks, Sprinkad, Autocad...).
